# Green-headed Coneflower

*Rudbeckia laciniata*

Light:	Full Sun, Partial Shade
Soil:	Sand, Loam, Clay
Moisture:	Moist, Wet
Benefits:	Pollinators, Birds, Host Plant
Height:	5'-8'
Blooms:	Sep
Zones:	4, 5, 6, 7, 8
Color:	Yellow
Spacing:	1'
Root:	Fibrous

Green-headed Coneflowers have daisy-like flowers with unusual dome-like green center disks on tall stems and typically grow three to four feet in cultivation. The plants are easily grown in average, medium well-drained soil in full sun or light shade.

Commonly called tall coneflower, the plants are vigorous spreaders if grown in borders and do especially well in wet soils that challenge most other plants; divide clumps to control growth. Fall rebloom can be encouraged by removing spent blooms.
